1. Introduction

1.1 About Shoe Shop POS

Shoe Shop POS is a desktop Point-of-Sale application built specifically for shoe retail stores. It runs on Windows and uses a local SQLite database — no internet connection is required for daily operations.

The system provides:

- Product management with support for sizes, colors, brands, and categories
- Barcode scanning and generation for quick checkout
- Thermal receipt printing for bills and barcode labels
- Sales reporting with profit calculations and visual charts
- Inventory tracking with low-stock alerts and stock adjustment history
- Supplier management and purchase order recording
- Role-based access — Admin (full access) and Cashier (POS + sales only)
- Light / Dark theme toggle

1.2 Who Should Use This Manual

Audience	Purpose
Shop Owners / Admins	Configure the system, manage users, and view reports
Cashiers	Process sales, handle payments, and print receipts
Technical Support	Installation, troubleshooting, and data management

1.3 Currency

All monetary values are displayed in Pakistani Rupees (Rs. / PKR).

2. System Requirements & Installation

2.1 Requirements

Component	Requirement
Operating System	Windows 10 or Windows 11 (64-bit)
Processor	Intel Core i3 or equivalent
RAM	4 GB minimum (8 GB recommended)
Storage	500 MB free space
Printer	80mm thermal receipt printer (optional but recommended)
Barcode Scanner	USB barcode scanner in keyboard-emulation mode (optional)

2.2 Installation

1. Run the provided installer (ShoeShopPOS Setup.exe).
 2. Follow the on-screen installation wizard.
 3. Once installed, launch Shoe Shop POS from the Start Menu or desktop shortcut.
 4. The application will automatically create the database on first launch.
-

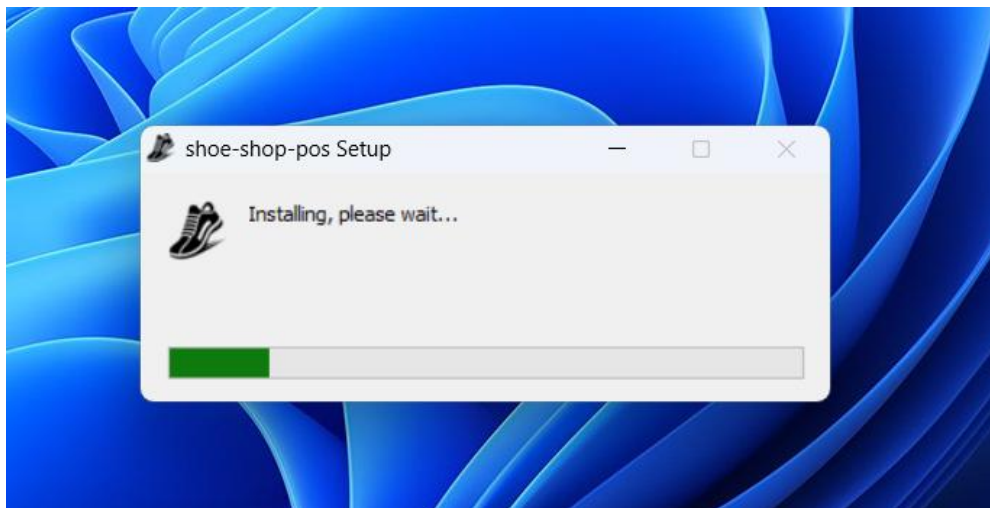

Figure 2-1: Installation setup screen

2.3 Database Location

The database file is stored at:

```
C:\ProgramData\ShoeShopPOS\pos.db
```

This folder also contains Write-Ahead Log (WAL) files for performance.

2.4 First Launch

On first launch, the system automatically:

- Creates the SQLite database and all required tables
- Seeds 8 default product categories (Sneakers, Sandals, Formal, Casual, Sports, Boots, Slippers, Heels)
- Creates the default admin user
- Creates default shop information

3. Getting Started — Login

3.1 Login Screen

When you launch the application, the Login Screen appears.

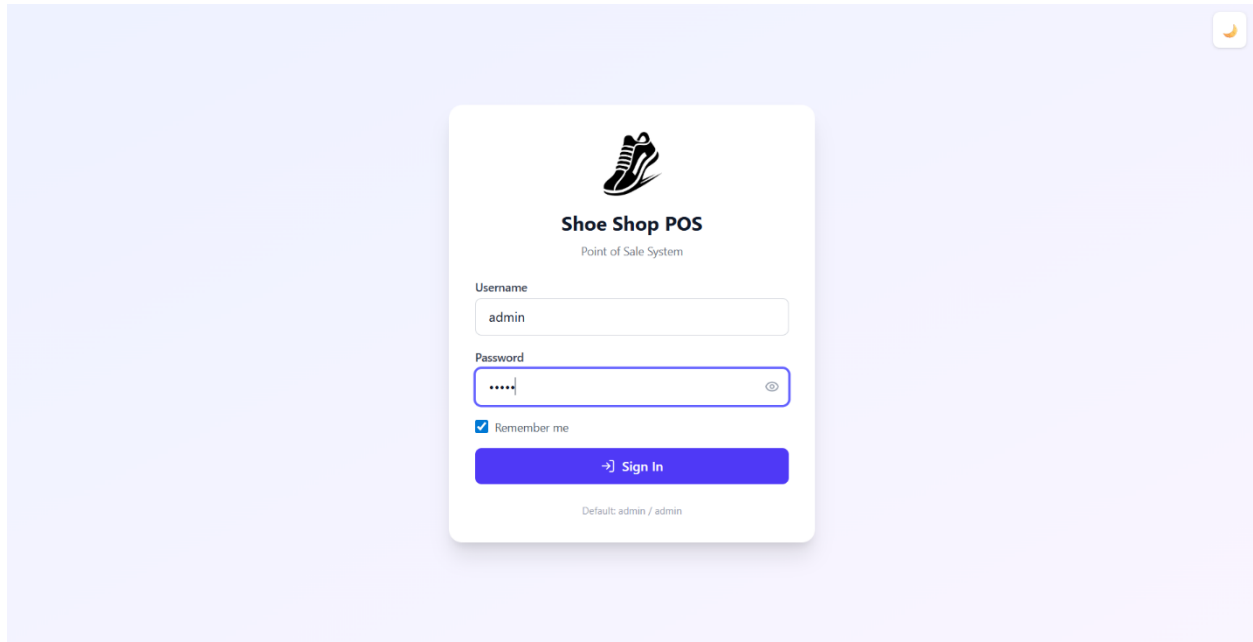

Figure 3-1: Login page with username, password, remember me, and theme toggle

3.2 Default Credentials

Username	Password	Role
admin	admin	Admin (full access)
cashier1	cashier123	Cashier (sales only)
cashier2	cashier123	Cashier (sales only)

Warning: Change the default password after first login!

3.3 Login Fields

Field	Description
Username	Enter your assigned username
Password	Enter your password (toggle to show/hide)

Field	Description
Remember Me	Check to save your username locally for faster login next time
Theme Toggle (top-right)	Switch between Light and Dark mode before logging in

3.4 Role-Based Redirection

After successful login, you are redirected based on your role:

Role	Redirected To
Admin	Dashboard (business overview)
Cashier	POS / Billing (to start taking orders immediately)

3.5 Login Errors

If you see "Invalid username or password":

- Check that Caps Lock is off
- Ensure you're using the correct username
- Contact the admin to reset your password

4. Dashboard

The Dashboard provides a real-time business overview. Accessible only to Admin users (Cashiers see a simplified view).

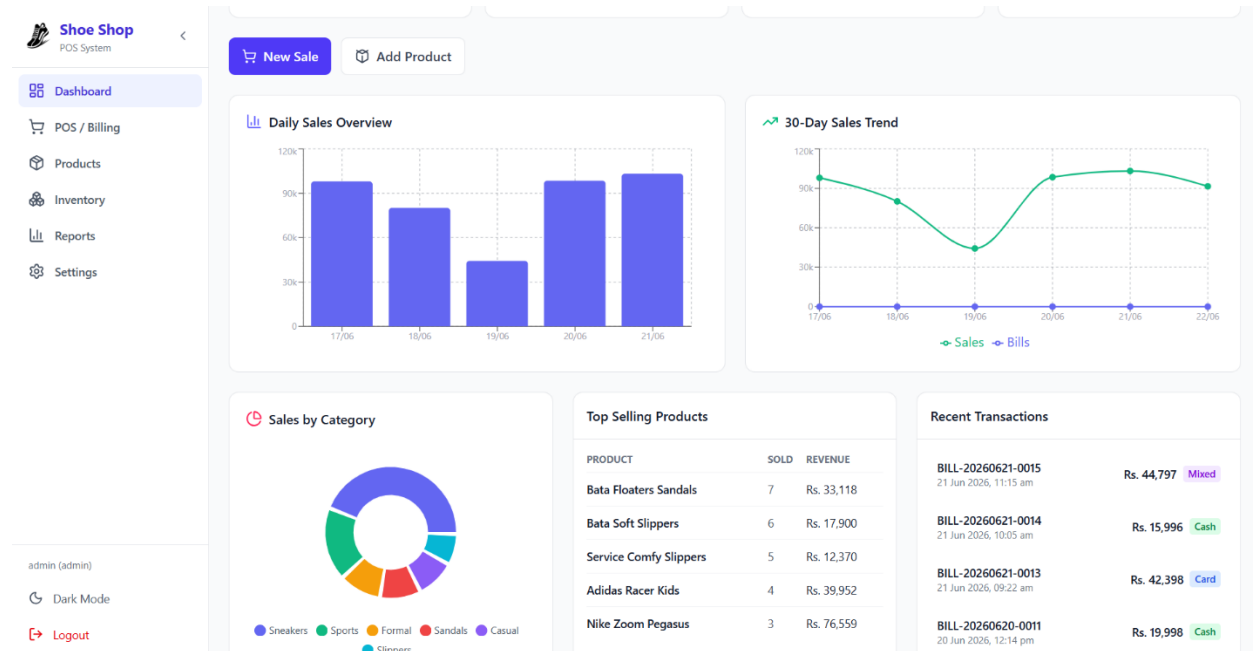

Figure 4-1: Dashboard with stats cards, charts, and recent transactions

4.1 Date Filter

At the top-right, you can filter data by:

Filter	Description
Today	Shows data for the current day
Week	Shows data for the last 7 days
Month	Shows data for the last 30 days

4.2 Stats Cards (Top Row)

Four cards display key metrics:

Card	Description
Sales	Total revenue for the selected period
Total Bills	Number of completed bills
Avg Bill	Average bill amount (Revenue / Bills)

Card	Description
Low Stock Items	Number of products below minimum stock level (clickable — navigates to Inventory)

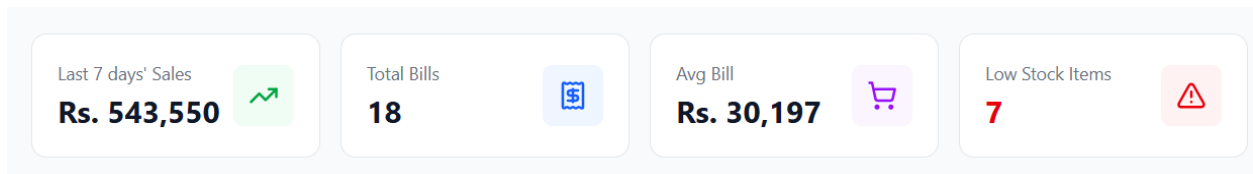

Figure 4-2: Four stats cards showing today's sales, bills, avg bill, and low stock alerts

4.3 Quick Action Buttons

- New Sale — Opens the POS / Billing screen to start a new sale
- Add Product — Opens the Product form to add a new product (Admin only)

4.4 Charts (Admin Only)

Bar Chart — Sales Overview

Shows daily revenue for the selected period.

Line Chart — 30-Day Sales Trend

Shows the sales trend and bill count over the last 30 days.

Pie Chart — Sales by Category

Shows revenue distribution across product categories.

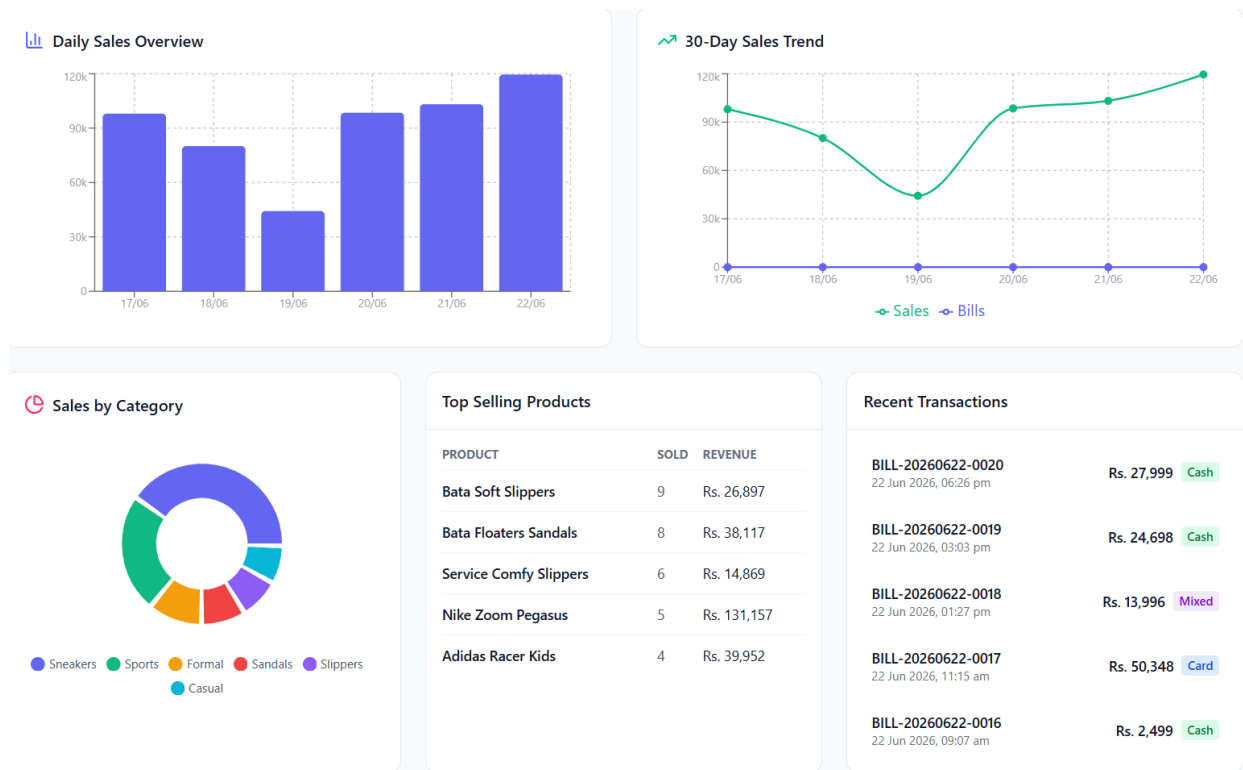

Figure 4-3: Dashboard charts showing sales data visually

4.5 Tables (Admin Only)

Top Selling Products

Lists the best-selling products sorted by quantity sold, with revenue.

Column	Description
Product	Product name
Sold	Quantity sold
Revenue	Total revenue from this product

Recent Transactions

Shows the last 5 completed sales with bill number, amount, and payment type (Cash / Card / Mixed).

5. POS / Billing Screen

The POS / Billing screen is the core of the system — where you create and process customer orders.

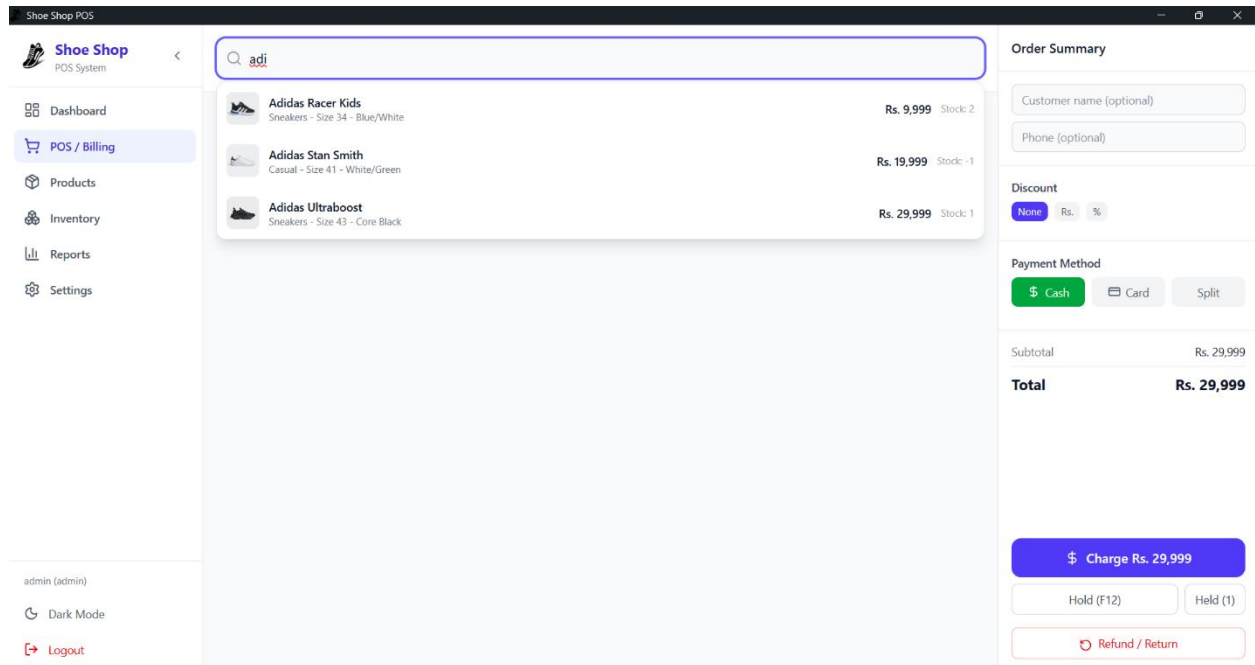

Figure 5-1: Full POS screen layout

5.1 Screen Layout

Section	Description
Left (Main Area)	Search bar at top, cart items list below
Right (Summary Panel)	Customer info, discount, payment, cart totals, and action buttons

5.2 Adding Products to Cart

Method 1: Barcode Scanner

1. Ensure the search bar is NOT focused (click anywhere outside input fields).
2. Scan the barcode using your USB barcode scanner.
3. The product is automatically added to the cart.

Method 2: Manual Search

1. Click the search bar or press F2.
2. Type a product name, category, brand, or barcode.
3. Search results appear as product cards below the search bar.

4. Click a product card to add it to the cart.

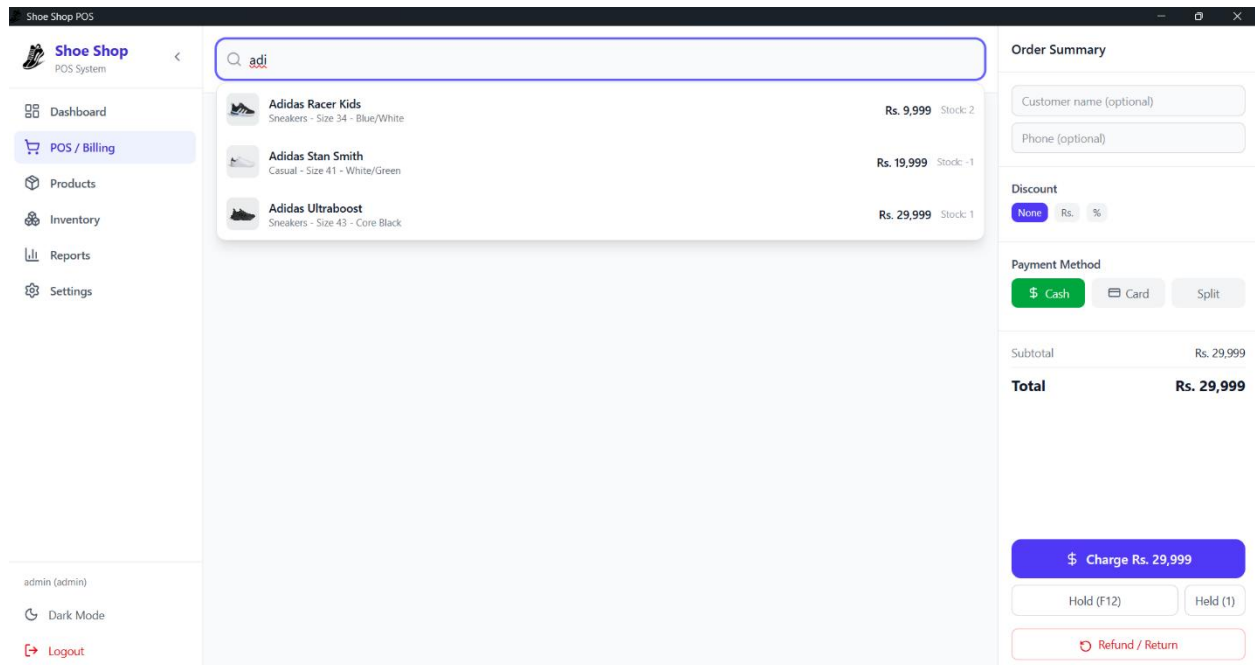

Figure 5-3: Search results with product cards

Method 3: Variant Selection

If a product has multiple variants (different sizes/colors), it appears with a purple left border. Click the variant group to open a variant picker table — select the specific size and color combination.

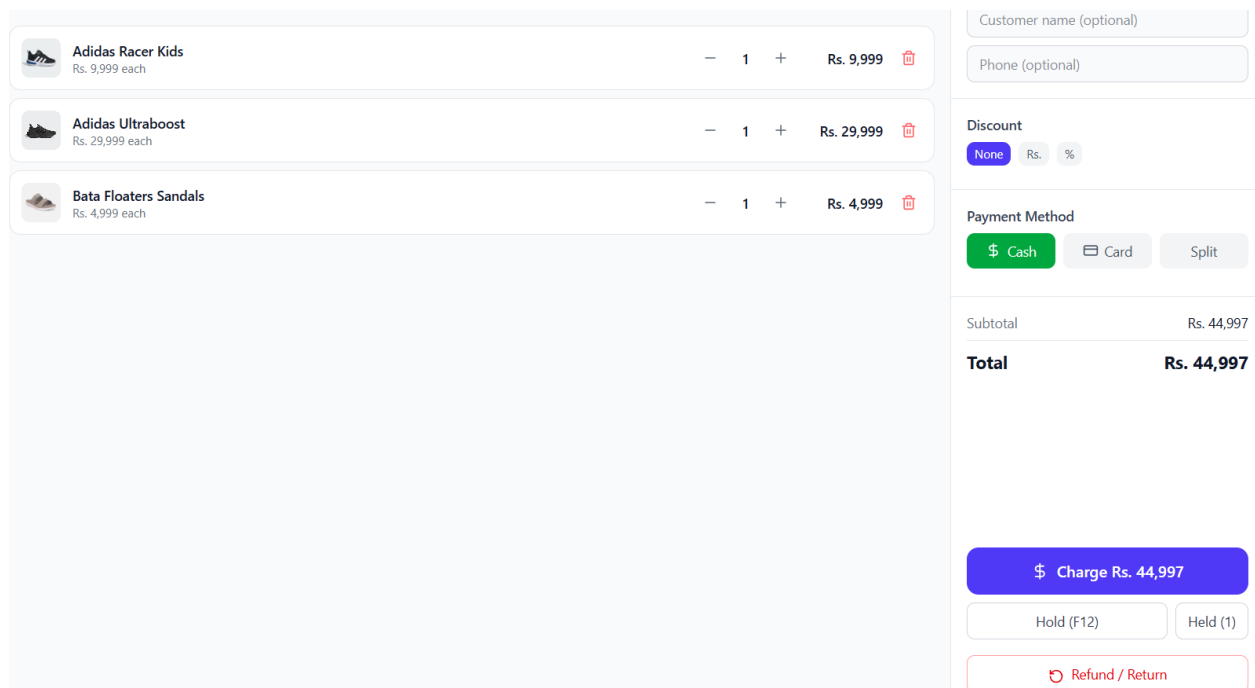

Figure 5-4: Variant selection modal showing sizes and colors in a grid

5.3 Managing Cart Items

Each cart item shows:

- Product image (or placeholder)
- Product name
- Unit price
- Quantity controls (+ / - buttons)
- Subtotal (price x quantity)
- Delete button

You can:

- Increase quantity — Click the + button
- Decrease quantity — Click the - button (removes item at 0)
- Remove item — Click the delete button

5.4 Customer Information (Optional)

Field	Description
Customer Name	Optional name on the receipt

Field	Description
Phone	Optional phone number for records
NTN	Optional National Tax Number for corporate invoices

These fields are optional and can be left blank for walk-in customers.

5.5 Discounts

The system supports three discount modes:

Mode	Description
None	No discount applied
Rs.	Fixed amount discount (e.g., Rs. 500 off)
%	Percentage discount (e.g., 10% off)

To apply:

1. Click Rs. or % button.
2. Enter the discount value in the input field.
3. The discount amount updates automatically in the totals.

Total	Final amount to charge

5.8 Completing a Sale

1. Click Charge [amount] button.
2. A Payment Confirmation modal appears.
3. For Cash payments: Enter the Cash Tendered amount — the system auto-calculates Change Due.

4. Click Confirm & Complete Sale.

5. A Receipt modal appears with the sale summary.

A payment confirmation dialog box with a white background and rounded corners, set against a dark gray border. The title "Confirm Payment" is at the top left. Below it, the "Total" is "Rs. 40,997". The "Payment" method is "Cash". The "Cash Tendered" is shown in a text input field with "45000" and a spinner control. Below this, "Change Due" is "Rs. 4,003" and "Change" is "Rs. 4,003", both in green. At the bottom is a large blue button labeled "Confirm & Complete Sale".

Confirm Payment	
Total	Rs. 40,997
Payment	Cash
Cash Tendered	45000
Change Due	Rs. 4,003
Change	Rs. 4,003
Confirm & Complete Sale	

Figure 5-8: Payment confirmation dialog

5.9 Receipt & Printing

After payment, the receipt modal shows:

- Success indicator
 - Bill number
 - Receipt preview (items, amounts, total)
 - Print Receipt button — sends to the configured thermal printer
 - New Sale button — clears the cart and starts a new sale (also press F1)
-

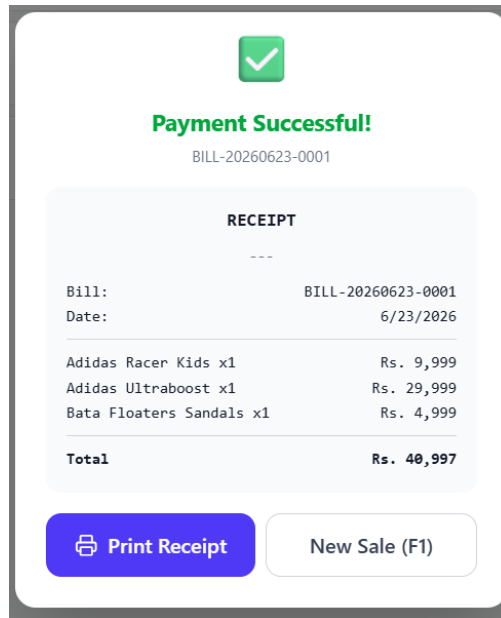

Figure 5-9: Receipt preview and print options

5.10 Holding a Bill

1. Click Hold (F12).
2. The current cart is saved as a "held bill."
3. Start a new sale.
4. Click Held (count) to view all held bills.
5. Click Return to Cart on any held bill to restore it.

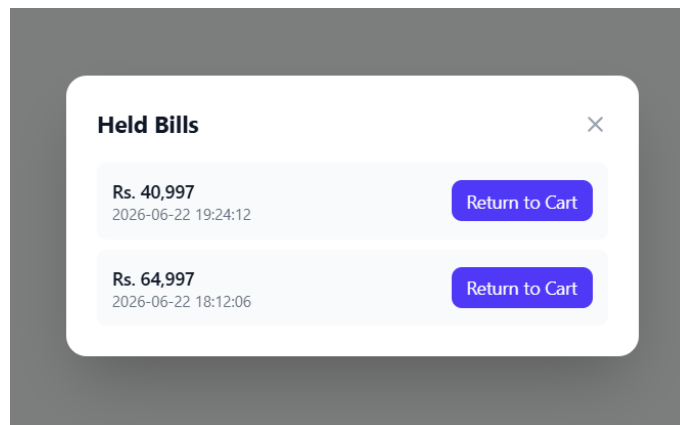

Figure 5-10: Held bills list showing saved incomplete bills

5.11 Refund / Return

1. Click Refund / Return at the bottom of the right panel.

2. Enter the Bill Number to search for the original sale.
3. Select which items and quantities to refund.
4. Enter a Reason for the refund.
5. Click Process Refund.
6. A refund bill is created, and stock is restored.

6.2 Searching & Filtering

- Search — Type a product name or barcode
- Category — Filter by selected category
- Gender — Filter by Men / Women / Kids / Unisex
- Status — Filter by Active / Inactive / All

6.3 Adding a New Product

Click Add Product button and fill in the product details (required fields marked with *):

Field	Required	Description
Product Name	Yes	Name of the shoe
Category	No	Select from existing categories
Brand	No	Select from existing brands
Gender	No	Men / Women / Kids / Unisex
Size	No	Single size (e.g., 42) or comma-separated for multiple sizes
Color	No	Single color or comma-separated for multiple colors
Buying Price	No	Cost price for profit calculation
Selling Price	Yes	Retail price
Stock	No	Initial stock quantity
Min Stock Level	No	Low stock alert threshold (default: 5)

Field	Required	Description
Product Image	No	Upload an image
Barcode	No	Auto-generated or enter manually

Create 9 Variants Product

Figure 6-4: Auto-variant detection preview

6.5 Barcode Management

- Auto-generate — Click Generate to create a random barcode
- Manual entry — Type any barcode manually
- Duplicate validation — The system checks for duplicate barcodes
- Preview — The barcode is rendered as a visual barcode image

6.6 Editing a Product

In table view, click the Edit button next to any product. The form opens with all existing data pre-filled.

6.7 Toggle Active/Inactive

Click the toggle button to activate or deactivate a product. Inactive products won't appear in POS search results.

6.8 Deleting a Product

1. Click the Delete button.
2. If the product has no sale records, it's deleted immediately.
3. If the product has sale records, a confirmation dialog warns you. Confirm to delete permanently.

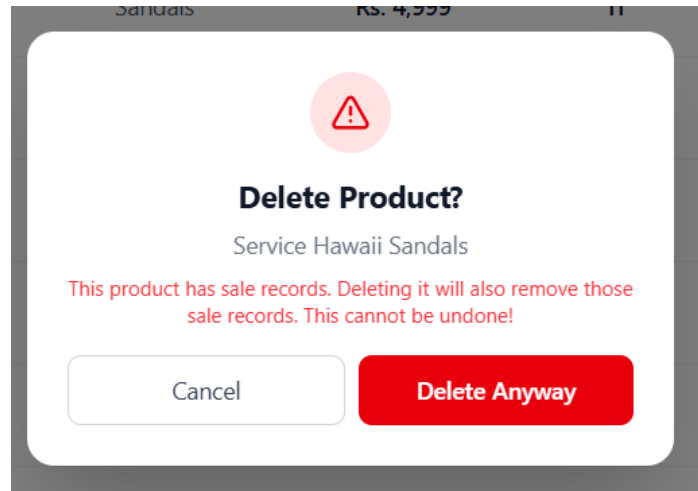

Figure 6-5: Delete confirmation dialog with warning about associated sale records

6.9 Bulk Import from Excel

1. Click Import button.
2. Select an Excel file (.xlsx) with the following columns:

Column	Required	Description
Name	Yes	Product name
Category	No	Must match existing category name
Gender	No	Men / Women / Kids / Unisex
Size	No	Product size
Color	No	Product color
Buying Price	No	Cost price
Selling Price	No	Retail price
Stock	No	Initial quantity
Barcode	No	Unique barcode

3. The import result modal shows: Imported count, Skipped rows, and any errors.

6.10 Export to Excel

Click Export to download all products as an Excel (.xlsx) file.

7. Inventory & Stock Management

The Inventory screen lets you track stock levels, adjust quantities, record purchases from suppliers, and view stock history.

PRODUCT	CATEGORY	CURRENT STOCK	MIN LEVEL	STATUS	ACTIONS
Adidas Racer Kids (34)	Sneakers	1	5	Low Stock	Adjust History
Adidas Stan Smith (41)	Casual	-1	5	Low Stock	Adjust History
Adidas Ultraboost (43)	Sneakers	0	8	Out of Stock	Adjust History
Bata Floaters Sandals (41)	Sandals	11	10	In Stock	Adjust History

Nike Zoom Pegasus (42)	Sports	7	5	In Stock	Adjust History
Service Comfy Slippers (42)	Slippers	-3	10	Low Stock	Adjust History

Figure 7-1: Inventory screen showing all products with stock levels

7.1 Stock Table

Column	Description
Product	Product name (with size if applicable)
Category	Product category
Current Stock	Current quantity in bold
Min Level	Minimum stock alert threshold
Status	Color-coded badge (In Stock / Low Stock / Out of Stock)
Actions	Adjust / History buttons

Rows with Low Stock or Out of Stock have a red/orange background highlight.

7.2 Low Stock Filter

Check “Low stock only” to show only products at or below their minimum stock level. The badge next to the filter shows the total count of low-stock items.

7.3 Searching Inventory

Type in the search bar to filter products by name or barcode.

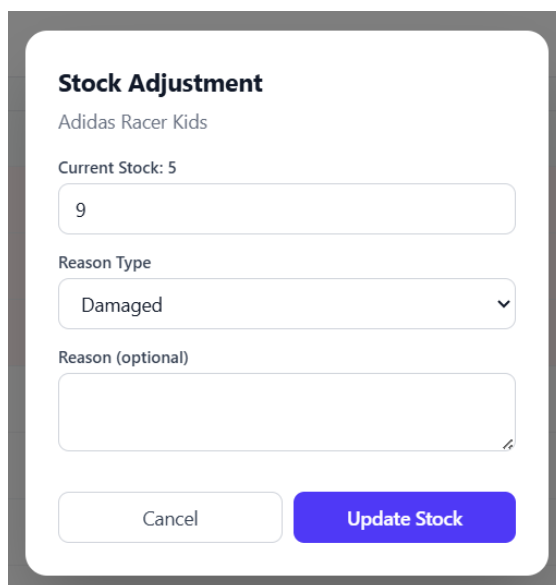

7.4 Stock Adjustment

To manually adjust stock:

1. Click Adjust next to a product.
2. In the modal, set the New Quantity.
3. Select a Reason Type:

Reason	Description
Physical Count	Stock found different during counting
Damaged	Product damaged and cannot be sold
Lost	Product lost or stolen
Return to Supplier	Sent back to supplier
Restock	Additional stock received (for manual entry without supplier)

4. Add an optional Reason note.
5. Click Update Stock.

Figure 7-4: Expanded variant group showing individual variant stock

7.7 Supplier Management

Viewing Suppliers

Click the Supplier Management section at the top of the page to expand/collapse the supplier list.

Adding a Supplier

1. Click Add Supplier button.
2. Fill in the form:

Field	Required	Description
Supplier Name	Yes	Full company name
Phone	No	Contact phone number
Address	No	Business address

3. Click Add Supplier.

Add New Supplier
Register a new supplier in the system

Supplier Name *
e.g. Al-Fajar Shoes Distributor
Full name or company name of the supplier

Phone Number
e.g. 0300-1234567

Address
e.g. Shop #5, Shah Alam Market, Lahore

Cancel Add Supplier

Figure 7-5: Add new supplier form with name, phone, and address

7.8 Receive Stock (Purchase Orders)

1. Click Receive Stock button.
2. Fill in the purchase form:

Field	Required	Description
Supplier	Yes	Select from registered suppliers

Field	Required	Description
Invoice Number	No	Supplier's invoice reference
Items	Yes	One or more products with quantity and buying price

3. For each item: select a Product, enter Quantity received, enter Buying Price (unit cost).

4. Click + Add Another Item to add more products.

5. Click Receive Stock to complete.

The system automatically records the purchase, updates product stock quantities, and updates buying prices for profit calculations.

Figure 8-4: Bill history list

Bill Actions:

Action	Description	Who Can Use
Reprint	Print the receipt again	Admin + Cashier
Void	Cancel the bill (restores stock)	Admin only

8.4 Export to Excel

Click Export to Excel to download the current report view as an .xlsx file. The exported file includes:

- Sales data for the selected period
- Revenue, cost, and profit figures
- All filtered bills

9. Settings

The Settings screen lets you configure system preferences.

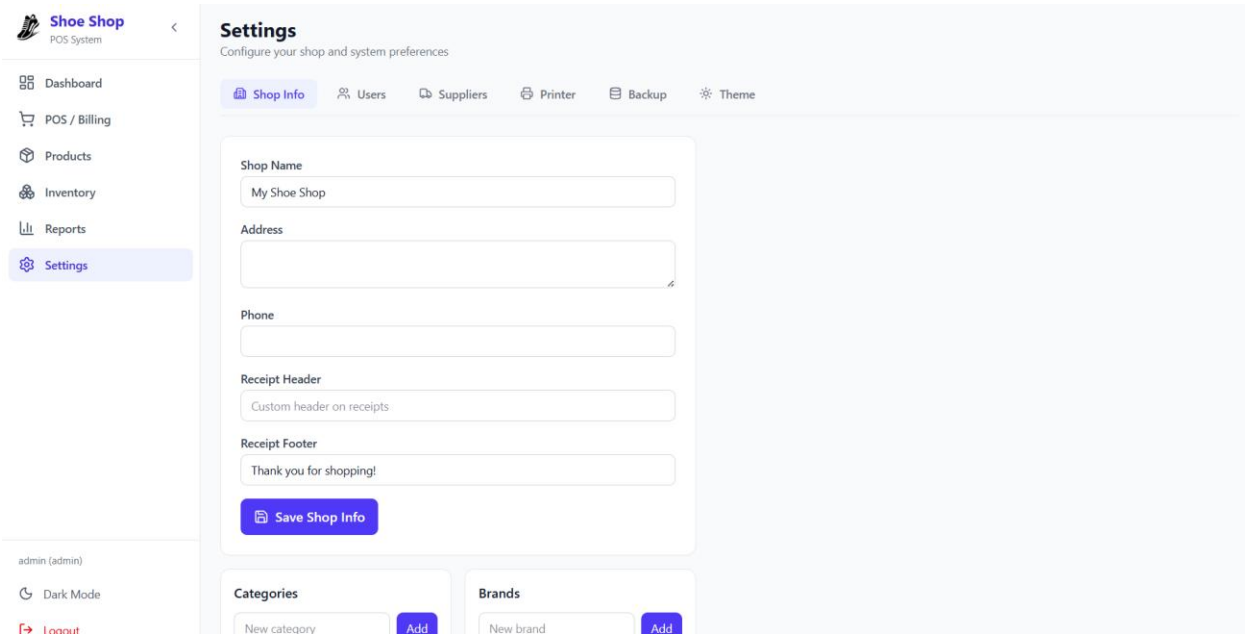

Figure 9-1: Settings screen showing all configuration tabs

9.1 Settings Tabs

Tab	Description
Shop Info	Business name, address, phone, receipt customization
Users	Add, edit, and manage system users
Suppliers	View and manage registered suppliers
Printer	Configure thermal printer for receipts
Backup	Database backup management
Theme	Light / Dark mode toggle

9.2 Shop Info

Configure the information that appears on receipts:

Field	Description
Shop Name	Business name (appears on receipts)
Address	Shop address

Field	Description
Phone	Contact number
Receipt Header	Custom text at top of receipt
Receipt Footer	Custom text at bottom of receipt (default: "Thank you for shopping!")

Click Save Shop Info to apply changes.

The screenshot shows a configuration form for a shop. It has the following fields and values:

- Shop Name:** My Shoe Shop
- Address:** Mian channu
- Phone:** 03xx-xxxxxx
- Receipt Header:** Custom header on receipts
- Receipt Footer:** Thank you for shopping!

At the bottom of the form is a blue button labeled "Save Shop Info".

Figure 9-2: Shop information configuration form

Categories & Brands Management

From the Shop Info tab, you can also:

- Add Category — Enter a name and click Add
- Add Brand — Enter a name and click Add

These are used in product forms for dropdown selections.

Service

Figure 9-3: Category and brand management

9.3 User Management

The Users tab lets you manage who can access the system.

User Roles

Role	Access
Admin	Full access — Dashboard, POS, Products, Inventory, Reports, Settings
Cashier	Limited access — POS, Products (view only), Inventory (view only)

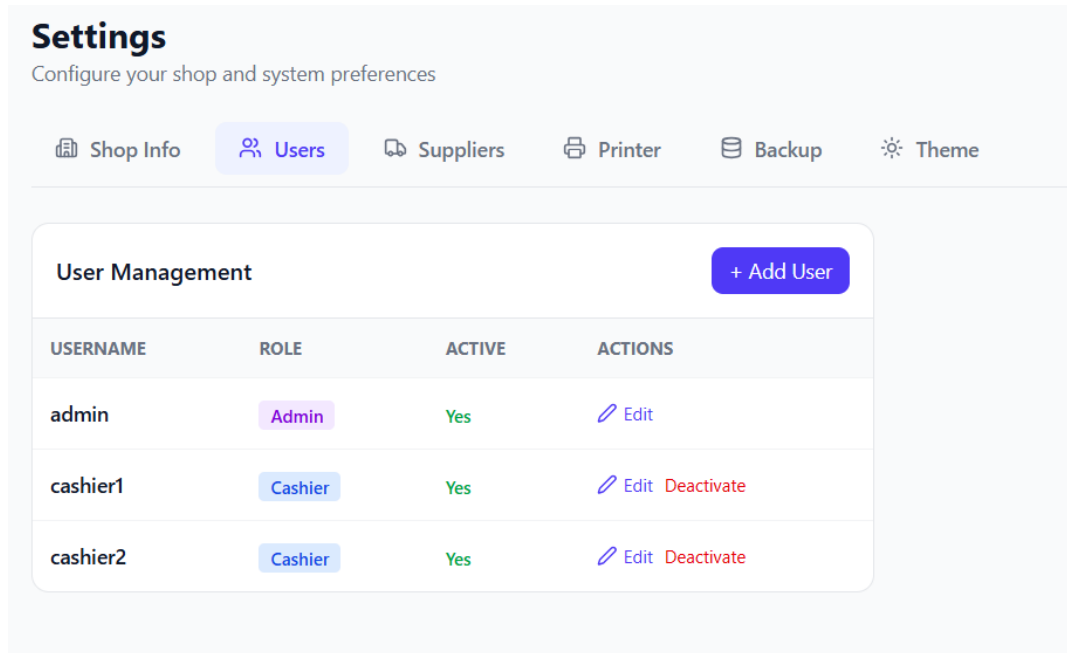

Figure 9-4: Users list showing username, role, and status

Adding a User

1. Click + Add User.
2. Enter Username (unique login name), Password (login password), Role (Admin or Cashier).
3. Click Create User.

Editing a User

Click Edit next to any user to:

- Change username
- Set a new password (leave blank to keep current)
- Change role (Admin role cannot be changed for security)
- Toggle Active status (Admin is always active)

The 'Edit User' form is shown with the following fields: a text input for 'cashier1', a text input for 'New password (leave empty to keep current)', a dropdown menu for 'Cashier', and a checked checkbox for 'Active (can log in)'. At the bottom are 'Cancel' and 'Save Changes' buttons.

Figure 9-5: Edit user dialog with role and active status

Deactivating a User

Click Deactivate to prevent a user from logging in. The admin user cannot be deactivated.

9.4 Supplier Management

From Settings -> Suppliers tab, you can view all registered suppliers and add new ones.

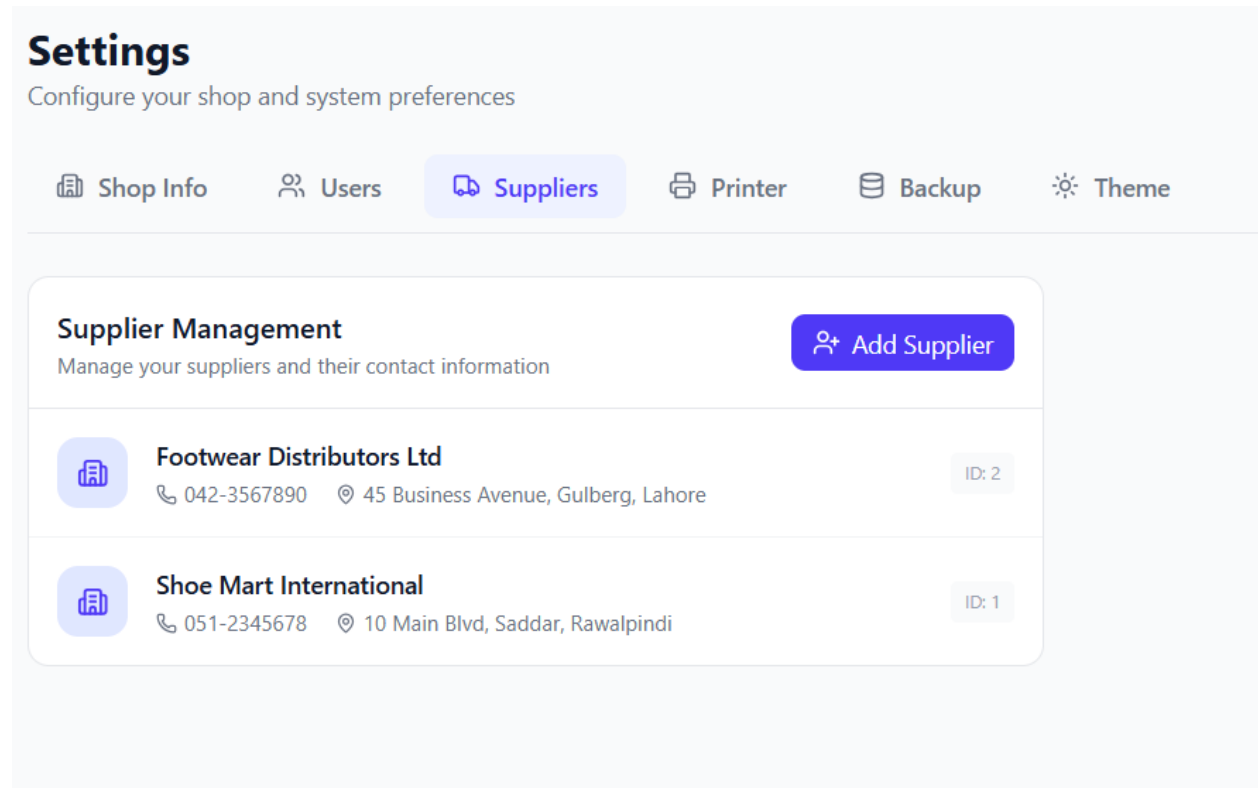

Figure 9-6: Suppliers list with contact details

Each supplier shows: Company name, Phone number, Address, Supplier ID.

Click Add Supplier to register a new supplier using the same form as in Inventory.

9.5 Printer Setup

Configure a thermal receipt printer for printing bills.

Microsoft Print to PDF

● Microsoft Print To PDF

Fax

● Microsoft Shared Fax Driver

Or Enter Manually

EPSON TM-T88VI

 **Test Print**

Figure 9-7: Printer configuration page with detected printers

Auto-Detect

1. Click Refresh to scan for installed Windows printers.
2. Detected printers are listed with their status (ready/yellow).
3. Click a printer name to select it.

Manual Entry

If your printer isn't detected, type the printer name exactly as shown in:

```
Windows Settings -> Bluetooth & Devices -> Printers & Scanners
```

Test Print

Click Test Print to send a test receipt to the selected printer. The status message will indicate success or failure.

Note: The printer name must match exactly as configured in Windows. Receipts are formatted for 80mm thermal paper.

9.6 Backup

The Backup tab lets you manage database backups.

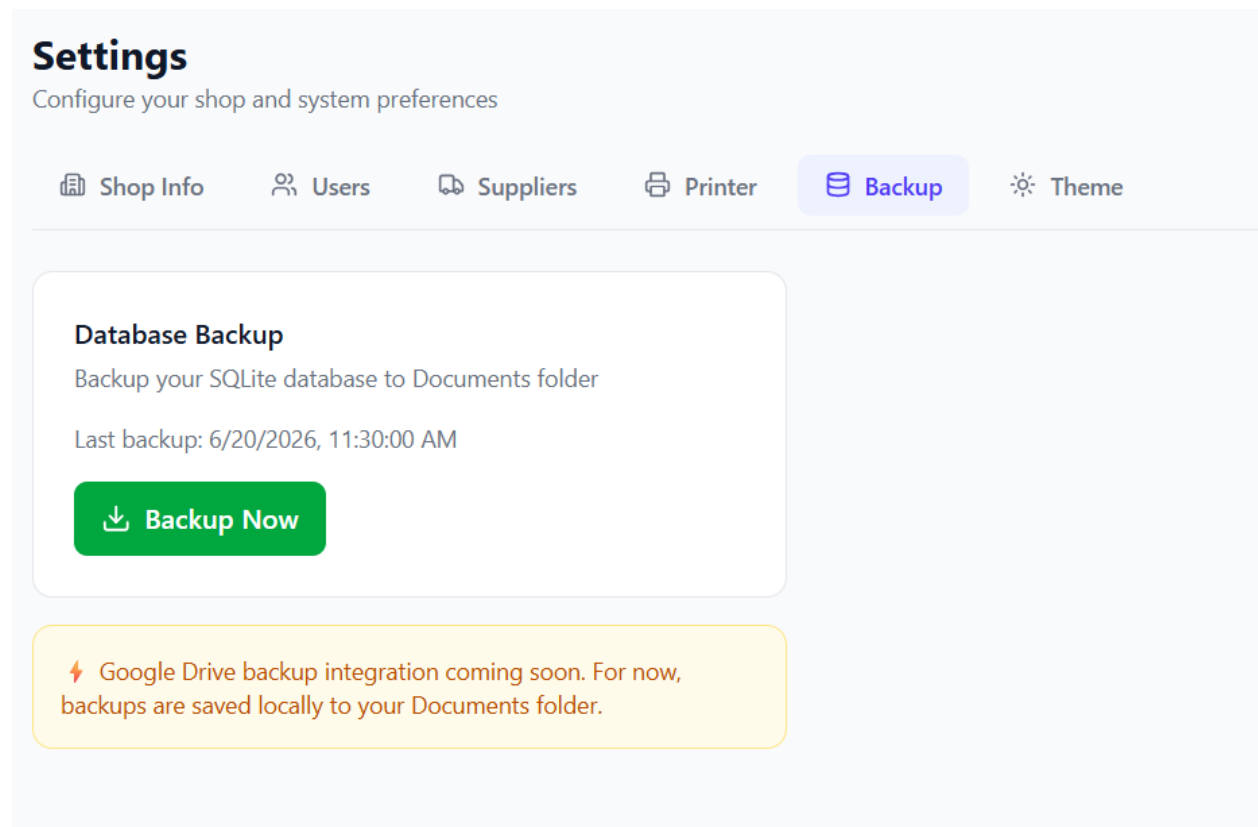

Figure 9-8: Database backup page

Backup Now

Click Backup Now to create a copy of the database. Backups are saved to your Documents folder in a ShoeShopPOS_Backups directory.

Last Backup

The system displays the timestamp of the last successful backup.

Note: Google Drive backup integration is planned for a future update.

9.7 Theme

Toggle between Light and Dark modes.

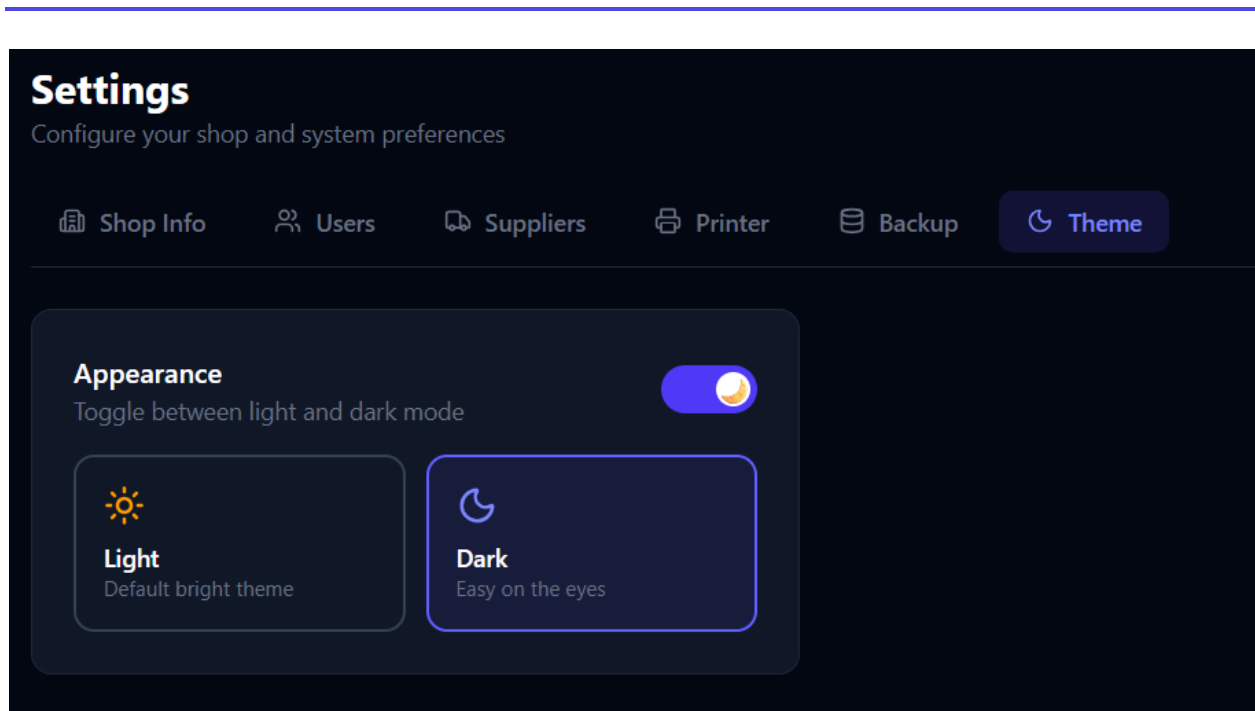

Figure 9-9: Theme selection interface

Click either the Light or Dark card, or use the toggle switch. The setting is saved and persists across app restarts.

10. Keyboard Shortcuts

The POS / Billing screen supports the following keyboard shortcuts:

Key	Action
F1	New Sale (clears cart and starts fresh)
F2	Focus / Search bar
F12	Hold current bill

Note: Barcode Scanner Mode: When no text input field is focused, keystrokes from a barcode scanner are automatically captured and looked up. The scanner must be in keyboard-emulation mode.

11. Troubleshooting

11.1 Application Won't Start

Symptoms: Application crashes on launch or shows a blank screen.

Solutions:

1. Ensure the database path exists: C:\ProgramData\ShoeShopPOS\
2. Delete the database file and restart the app (a fresh database will be created):

```
C:\ProgramData\ShoeShopPOS\pos.db
```

3. Reinstall the application.

11.2 Printer Not Working

Symptoms: "No printer configured" error when printing receipts.

Solutions:

1. Go to Settings -> Printer.
2. Click Refresh to detect printers.
3. Ensure the printer is installed in Windows.
4. Check the printer name matches exactly.
5. Run a Test Print to verify.

11.3 Barcode Scanner Not Adding Products

Symptoms: Scanning a barcode does not add the product to the cart.

Solutions:

1. Ensure no input field is focused (click on the empty cart area first).
2. Verify the barcode exists in the Products database.
3. Check that the product is Active (not Inactive).
4. Ensure the scanner is in keyboard-emulation mode.

11.4 Login Issues

Symptoms: "Invalid username or password" for valid credentials.

Solutions:

1. Check Caps Lock is off.
2. Reset the admin password using the seed script:

```
node scripts/seed.cjs
```

(This recreates default users if the database is empty.)

11.5 Database Reset (Full Clean)

To completely reset the database:

1. Close the application.
2. Delete the database file:

```
C:\ProgramData\ShoeShopPOS\pos.db  
C:\ProgramData\ShoeShopPOS\pos.db-wal  
C:\ProgramData\ShoeShopPOS\pos.db-shm
```

3. Restart the application — a fresh database is created automatically.

Important: This deletes ALL data including products, sales, and users!

12. Appendix — Database & Data Management

12.1 Database Schema

The application uses SQLite with the following tables:

Table	Description
users	System users (admin/cashier) with hashed passwords
categories	Product categories (Sneakers, Sandals, etc.)
brands	Product brands
products	Main product catalog with stock, pricing, barcodes
suppliers	Supplier contact information
purchases	Purchase orders from suppliers
purchase_items	Individual items in each purchase
sales	Completed and held bills
sale_items	Individual items in each sale
stock_adjustments	Stock change history with reasons
settings	Key-value settings (printer name, backup time)
shop_info	Shop name, address, receipt customization

12.2 Seed Data

The system comes with a seed script at:

```
scripts/seed.cjs
```

To run:

```
node scripts/seed.cjs
```

This script seeds the database with:

- 4 brands (Nike, Adidas, Bata, Service)
- 12 products covering all categories and genders
- 2 suppliers
- 2 purchase orders
- 5 days of sales (including active, void, and held bills)
- Stock adjustments
- System settings

Note: The seed script only runs if the products table is empty.

12.3 Default Data Created by App

On first launch, the app automatically creates:

Item	Value
Admin user	admin / admin
8 Categories	Sneakers, Sandals, Formal, Casual, Sports, Boots, Slippers, Heels
Default shop	Name: My Shoe Shop

End of User Manual | Shoe Shop POS v1.0 | June 2026
For support, contact your system administrator.
